

Inge Lehmann.

the Grande Dame of ~~sies~~ seismology.

- appointed head of the seismic section at the Danish Geodetic Institut. in 1928
- her career was in Denmark and the USA.
- she published evidence for the existence of the Earth's solid inner core in 1936
- 1923 she became a teaching assistant to the professor of actuary science
- her work at the three observative stations, and being able ~~to~~ read ~~for~~ data from three Seismograms had helped her with her studies about earth.
- ~~in 1930~~ Inge Lehman had faced discrimination because of her gender, and it was very hard for her as a woman to study ~~science~~ science.
- she is from ~~of~~ a family that ~~intend~~ included many educated members from her father's side and the mother as well.
